ADVISORY COMMISSION ON INTERGOVERNMENTAL RELATIONS
March 1969

Private Citizens:

Farris Bryant, Jacksonville, Florida, Chairman
Alexander Heard, Nashville, Tennessee
Dorothy I. Cline, Albuquerque, New Mexico

Members of United States Senate:

Sam J. Ervin, Jr., North Carolina
Karl E. Mundt, South Dakota
Edmund S. Muskie, Maine

Members of United States House of Representatives:

Florence P. Dwyer, Mrs., New Jersey
L. H. Fountain, North Carolina
Al Ullman, Oregon

Officers of Executive Branch, Federal Government:

*Robert H. Finch, Secretary of Health, Education, and Welfare
*Robert P. Mayo, Director of Bureau of the Budget
*George Romney, Secretary of Housing and Urban Development

Governors:

Buford Ellington, Tennessee
Nelson A. Rockefeller, New York
*Raymond P. Shafer, Pennsylvania
(Vacancy)

Mayors:

*Richard G. Lugar, Indianapolis, Indiana
Jack Maltester, San Leandro, California
Arthur Naftalin, Minneapolis, Minnesota
William F. Walsh, Syracuse, New York

Members of State Legislative Bodies:

*W. Russell Arrington, Senator, Illinois
*Robert P. Knowles, Senator, Wisconsin
Jesse M. Unruh, Assemblyman, California

Elected County Officials:

John F. Dever, Middlesex County, Massachusetts
Angus McDonald, Yakima County, Washington
Gladys N. Spellman, Prince George's County, Maryland

*Appointed to the Commission subsequent to the preparation of this report.

PREFACE

In this Report, the Advisory Commission probes the current status of courses in American State and local government and intergovernmental relations in college and university political science curricula. The study seeks to determine the extent to which political science departments in higher educational institutions are fulfilling their instructional role in these fields. Specific areas receiving inadequate treatment are identified and certain possible explanations for the amount of attention given to these subjects are advanced.

The survey is based on the results of a questionnaire distributed to chairmen of political science departments, using a list supplied by the American Political Science Association. Replies are classified in terms of institutional enrollment size, regional location, and public-private control.

This Report contains no new suggestions of a policy character, and is issued strictly as an informational and reference document.

Farris Bryant
Chairman

ACKNOWLEDGMENTS

Responsibility for the preparation of this report was shared by David B. Walker and Carl W. Stenberg of the Commission staff. They benefited from a review of a draft of the report by a number of individuals, including Walter E. Beach and Earl M. Baker of the American Political Science Association, Allen D. Manvel, Research Associate with the Commission, and Royce Hanson, Director of the Washington Center for Metropolitan Studies.

Statistical assistance was provided by Francis X. Tippett. The manuscript was typed by Carolyn LeVere, Linda Topham, and Vicki Watts.

Wm. G. Colman
Executive Director

FEDERALISM AND THE ACADEMIC COMMUNITY: A BRIEF SURVEY

Introduction

No general consensus exists concerning the status of American State and local government and inter-governmental relations as fields within the discipline of political science. Any attempt to make such an evaluation by gauging the attention given to these subjects in colleges and universities should distinguish between the two basic traditional roles of American higher educational institutions—research and teaching.

Some observers have noted that in recent years political scientists have become increasingly interested in conducting research in American State and local government.¹ As late as 1963, however, a large number of the members of the American Political Science Association responding to a questionnaire survey of trends in their discipline indicated that State and local government were areas in which the least significant work was being done.² Yet, five years later, in a symposium on the advance of political science as a discipline, it was contended that:

State and local politics as a field of political science is no longer a 'lost world' or the site of 'Dullsville.' Rather than being the laggard of the discipline that some political scientists perceive it to be, the study of state and local politics has reentered the mainstream of political research. Much of the work in political science which has influenced the drift of the profession has been within its domain.³

Academic research in American intergovernmental (Federal-State-local) relations has not as yet entered the "mainstream" of the political science discipline. As one participant in the Third Annual Orvil E. Dryfoos Conference on Public Affairs, held in 1966 to explore the nature, significance, and implications of the "new federalism," asserted: "There is very little doubt . . . that one of the most challenging and badly neglected areas of research relates to the problems associated with the new federalism."⁴

This study focuses on the instructional rather than the research role of colleges and universities. While these functions are related, it is quite conceivable that advances in one area may not be transmitted to the other. The recent increasing popularity of State and local government and the gradual advance of inter-governmental relations as subjects of academic research, then, may not be producing a correspondingly greater classroom attention to these fields. This possibility prompted the Advisory Commission to undertake a survey to determine the extent to which introductory, intermediate, and advanced courses in American State and local government and intergovernmental relations are contained in college and university political science curricula.

Methodology

In May 1968 questionnaires were distributed by the ACIR, using a list supplied by the American Political Science Association, to political science department chairmen of 883 colleges and universities in the United States. The doctorate in political science was not offered in the majority of the institutions surveyed. In August, a second round of questionnaires was sent to those institutions which had initially failed to reply. The study is based upon the responses of 562 chairmen.

The final return rate of 63.6 percent was generally free from bias.⁵ As indicated in Appendix A-2, over forty-four percent of the 562 who answered the questionnaire and almost sixty-five percent of the 321 who failed to reply represented institutions with an enrollment of less than 2,000. Yet, this was not unexpected, since nearly fifty-two percent of the questionnaires were sent to chairmen of political science departments in institutions of this size. A relatively large number of replies were received from colleges and universities situated in the Southeastern, Mideastern, Great Lakes, and Plains regions. Again, this is basically in accord with the location of the institutions surveyed; about twenty-five percent were in the Southeast, nineteen percent in the Mideast, sixteen percent in the Great Lakes, and thirteen percent in the Plains. Finally, while about sixty percent of the answers and seventy-four percent of the failures to respond came from private colleges and universities, this is a reflection of the fact that over sixty-five percent of the institutions surveyed were under private control. To summarize, while returns were incomplete, the parallel distribution of responding and non-responding institutions suggests that the survey is generally representative, and affords an adequate basis for generalizations concerning the status of courses in State and local government and intergovernmental relations in political science curricula.

Chairmen were asked three sets of questions directly relevant to the basic purpose of the study: (1) the extent to which their introductory course in political science included treatment of State and local government; (2) the approximate proportion of lecture time and course-related reading allocated to these fields in the introductory course; and (3) the number of intermediate and advanced courses in State and local government and intergovernmental relations offered by their department. Other questions dealt with the works used for reading assignments,⁶ and the usefulness of ACIR reports in introductory, intermediate, and advanced courses in these fields.⁷

Replies to all of the above questions, except for those dealing with reading assignments, were classified and tabulated in terms of three factors: (1) the total enrollment of the institution, including the number of full- and part-time resident undergraduate and postbaccalaureate students⁸ as of Fall 1967 as reported by the Office of Education of the U. S. Department of Health, Education, and Welfare;⁹ (2) the geographical region

⁵ A copy of the ACIR-APSA questionnaire and a breakdown of respondents and non-respondents by institutional size, location, and control are contained in Appendix A1-A2.

⁶ Many respondents did not answer the two questions concerning works used for reading assignments in introductory, intermediate, and advanced level courses in State and local government and intergovernmental relations. They indicated that this was due to the number and variety of works assigned in these courses. Appendix J summarizes the replies to this question by listing the ten most frequently mentioned works in each of these subject areas.

⁷ The two questions dealing with the usefulness of ACIR reports were designed to elicit information of primary interest to the Advisory Commission, and therefore are not treated in detail in this study. In summary, the 464 replies to a question concerning the usefulness of these reports in State and local government courses were divided as follows: "Very useful"—20.5 percent; "Occasionally useful"—55.2 percent; "Not useful"—11.8 percent; "Not received, not known"—12.5 percent. With reference to intergovernmental relations courses, the 231 replies were grouped as follows: "Very useful"—26.0 percent; "Occasionally useful"—37.6 percent; "Not useful"—11.7 percent; "Not received, not known"—24.7 percent.

⁸ Replies from institutions having a political science enrollment consisting wholly or predominantly of post-baccalaureate rather than undergraduate students were not tabulated.

⁹ U. S. Department of Health, Education, and Welfare, Office of Education, *Opening Fall Enrollment in Higher Education, 1967, Supplement A: Undergraduate and Postbaccalaureate Students*, by Marjorie O. Chandler and Mabel C. Rice (Washington, D.C.: U. S. Government Printing Office, 1968).

in which the college or university was located;¹⁰ and (3) whether the institution was publicly or privately controlled. These factors reflect certain assumptions: the number of course offerings in State and local government and intergovernmental relations would probably increase in accordance with institutional size; some regions more than others would tend to give attention to these fields; and publicly supported institutions would be more likely to provide for course treatment of one or more of these subject areas due to State legislative requirements.

Findings

Introductory Courses—Their Nature: Chairmen were asked to indicate the duration of the introductory course in political science offered by their department and the extent to which it included treatment of American State and local government. Fifty-two percent answered that the basic course lasted for one semester, while almost fifteen percent pointed out that it was a one quarter course. A sizeable minority—twenty-six percent—noted that their introductory course was two semesters in length. Some chairmen, particularly those in larger universities, replied that their basic course was designed as a broad survey of the nature, scope, and objectives of political science as an academic discipline rather than as a preface to specific area studies. For this reason, they stated that no attention was given to State and local government in this course. On the other hand, a number of the respondents having a two-semester introductory course—with the first semester allocated to the study of American national government and the second to State and local government—indicated that the treatment given to the latter fields was “substantial.”

Overall Introductory Treatment: Table 1 shows that almost fifty-six percent of the responding departments gave “some” attention to State and local government in their introductory political science course, while over twenty-three percent provided for no treatment of these fields. Nearly twenty-one percent of the respondents claimed that “substantial” attention was given to State and local government at the introductory level. It should be noted, however, that most of these replies were applicable to basic courses which lasted for one semester. From this table, institutional size alone would not appear to be significantly associated with the focus given to these subjects.

Appendix Tables B1-B8 provide a more detailed breakdown of these replies. In terms of regional patterns, New England (71%) and the Far West (72%) had significantly higher proportions of “some” responses than the national average (55.6%), while the Southwest (33%) was far below this mark. On the other hand, the intraregional division of “substantial” answers shows that New England (5%) and the Mideast (13%) fell well under the national proportion (20.8%), and that the total for the Southwest was two and one-half times the national figure. For the “none” replies, the Plains (38%), the Mideast (29%), and the Rocky Mountains (26%) surpassed the overall national percentage (23.6%), while the Far West (13%), the Southwest (14%), and the Great Lakes (17%) had the lowest regional proportions for this category.

In terms of the public-private character of educational institutions, the nationwide totals indicate that about sixty-two percent of those colleges and universities falling in the “some” response category were private and thirty-eight percent were public. On a regional basis, only the Great Lakes States came close to paralleling these figures. For those institutions within the “substantial” group, about forty-four percent were public and fifty-six percent were private. Among the eight regions, however, there were wide variations with only three—the Great Lakes, the Far West, and the Southeast—bearing much resemblance to the national composition. The overall pattern of “none” replies indicates a 43-57 percentage distribution between public and private colleges and universities, respectively, with both New England and the Great

¹⁰The eight-fold regional classification utilized in tabulating the questionnaire responses conforms to that used by the Office of Education in *Opening Fall Enrollment in Higher Education, 1967*. See Appendix Table A-3 for a listing of the number of institutions included in the survey by region and State.

Table 1

**EXTENT OF TREATMENT OF STATE AND LOCAL GOVERNMENT IN
INTRODUCTORY POLITICAL SCIENCE COURSE**

(By Enrollment Size of Institution)

Size of Institution (total enrollment)	Total Number*	Percent Distribution		
		None	Some	Substantial
Total	552	23.6	55.6	20.8
Under 1,000	97	19.6	58.8	21.6
1,000 – 1,999	146	22.6	60.3	17.1
2,000 – 3,499	73	21.9	54.8	23.3
3,500 – 4,999	46	23.9	43.5	32.6
5,000 – 7,499	49	30.6	42.9	26.5
7,500 – 9,999	43	25.6	60.5	13.9
10,000 – 14,999	42	26.2	57.1	16.7
15,000 – 19,999	28	21.4	60.7	17.9
20,000 or over	28	28.6	50.0	21.4

*Respondents not providing data on this item number 10.

Lakes corresponding to this division. In short, for all three response categories the major regional finding with respect to the public-private factor is one of great diversity.

Introductory Lecture Time: In order to gain a clearer perspective concerning the extent to which State and local government receive treatment in introductory level political science courses, chairmen were asked what approximate proportion of lecture time and course-related reading was allocated to these fields. With reference to the former, Table 2 reveals that nearly forty-seven percent of the respondents answered that "less than one-fourth" of the lecture time in their introductory course was allotted to State and local government, while over twenty-four percent replied that no lecture time was provided for these subjects. The remaining twenty-nine percent of these departmental chairmen indicated that "one-fourth or more" of the basic course lecture time was devoted to State and local government.

In terms of enrollment size, no clear pattern is revealed, although institutions in the 7,500-9,999 (15%) and 10,000-14,999 (19%) classes tended to fall well below the overall figure (28.9%) for allocating "one-fourth or more" of the introductory lecture time to these topics. The percentages in this category for the smaller colleges (under 1,000-38%; 1,000-1,999-25%; 2,000-3,499-39%) either surpassed or were on a level equivalent with the figures for the multi-university groups (15,000-19,999-26% and 20,000 or over-31%).

The regional breakdown of these responses (see Appendix Tables C1-C8) shows that institutions located in the Southwest (46%), the Rocky Mountains (45%), and the Southeast (42%) far surpassed the national average (28.9%) for allocating "one-fourth or more" of basic course lecture time to State and local government. Those in New England (11%), the Great Lakes (15%), and the Mideast (17%) were well below the overall figure. The intraregional division for the "less than one-fourth" category finds New England (68%) and the Far West (58%) far above the nationwide average (46.9%), while the Rocky Mountains (30%), the Southeast

Table 2

10,000 – 14,999	42	4.8	7.1	7.1	47.7	33.3
15,000 – 19,999	27	7.4	7.4	11.1	51.9	22.2
20,000 or over	26	—	3.9	26.9	42.3	26.9

*Respondents not providing data on this item number 37.

(38%), and the Southwest (41%) ranged below this level. The “none” replies clustered more heavily in the Great Lakes (39%) and the Mideast (32%), while the proportions for Far Western and Southwestern institutions were half the 24.2 percent national figure.

With reference to the public-private variable, about fifty-eight percent of the nationwide total for the “one-fourth or more” responses came from private and forty-two percent from public institutions. Of these, the intraregional proportions for the Southwest (68%) and the Rocky Mountains (67%) significantly exceeded the national public average, while the Great Lakes (92%) and the Mideast (67%) were well above the overall private figure. A quite similar total percentage breakdown (57%—private, 43%—public) was indicated for the “none” group. Public institutions in the Rocky Mountains (80%), the Far West (67%), the Southwest (60%), and the Southeast (57%) greatly surpassed the national level, while those under private control in the Mideast (70%) and the Great Lakes (65%) again far outstripped the national average. Of the “less than one-fourth” answers, about thirty-eight percent came from public and sixty-two percent from private institutions, with intraregional proportions markedly exceeding the national figures for public institutions in the Southwest (53%) and the Rocky Mountains (50%), and those for private colleges and universities in New England (77%), and the Mideast (69%).

Introductory Reading Assignments: Not surprisingly, the pattern of replies to the question dealing with the amount of State and local reading assigned in the introductory political science course closely paralleled that relating to the amount of lecture time devoted to these fields. As Table 3 reveals, forty-five percent of the responding departments allotted “less than one-fourth” of the basic course-related reading to State and local government, while for over twenty-seven percent no course-related reading was assigned for these subjects. Chairmen of the remaining departments noted that State and local government were allocated “one-fourth or more” of the assigned reading in their introductory course.

Table 3

**APPROXIMATE PROPORTION OF COURSE-RELATED READING ALLOCATED TO STATE
AND LOCAL GOVERNMENT IN INTRODUCTORY POLITICAL SCIENCE COURSE**

(By Enrollment Size of Institution)

Size of Institution (total enrollment)	Total Number*	Percent Distribution				
		1/2	1/3	1/4	Less Than 1/4	None
Total	519	8.3	6.5	12.7	45.1	27.4
Under 1,000	91	7.7	7.7	18.7	45.0	20.9
1,000 – 1,999	139	8.6	3.6	10.8	51.8	25.2

15,000 – 19,999	26	7.7	7.7	11.6	53.8	19.2
20,000 or over	26	3.9	7.7	19.2	34.6	34.6

*Respondents not providing data on this item number 43.

Focusing on the enrollment factor, again no meaningful relationship appears between size and the proportion of basic reading time assigned to these subject areas. With reference to the “one-fourth or more” responses, for example, small colleges under 1,000 and those with an enrollment from 2,000 to 3,499 gave much greater attention to State and local reading assignments (34% and 38%, respectively) than multi-universities (15,000-19,999—27% and 20,000 or over—31%), and were markedly above the national benchmark (27.5%). At the same time, colleges from 1,000-1,999 were more than four percentage points below the overall figure for this response group, but about three points above institutions having enrollments of 7,500-14,999.

The breakdown of replies in terms of region and institutional control (see Appendix Tables D1-D8) indicates a pattern which, with only a few exceptions, closely resembles that in Appendix C. Institutions located in the Southwest (50%), the Rocky Mountains (45%), the Far West (38%), the Southeast (36%), and the Plains (33%) exceeded the national response average (27.5%) for “one-fourth or more” of the introductory course reading time allotted to State and local government, while those in New England (11%), the Midwest (15%), and the Great Lakes (14%) fell well below this figure. With respect to the “less than one-fourth” group, institutions in New England (65%) and the Midwest (52%) surpassed the national average (45.1%), while those in the Rocky Mountains (20%), the Southwest (35%), and the Southeast (39%) were well beneath this level. The intraregional clustering for “none” responses relative to the 27.4 percent national average was heaviest in the Great Lakes (40%), the Rocky Mountains (35%), and the Midwest (33%), and lightest in the Far West (13%) and the Southwest (15%).

A breakdown of the intraregional proportions in terms of the public and private variables reveals a similar mirroring of Appendix C. An overall forty-five percent of the “one-fourth or more” responses came from public institutions. Of these, the Rocky Mountains (78%) and the Southwest (70%)

significantly exceeded, while the Great Lakes (17%) and the Mideast (27%) were substantially less than the nationwide average. With reference to the "less than one-fourth" group, the thirty-seven percent total public response was outstripped by the Southwest (50%), the Rocky Mountains (50%), and the Far West (48%), while New England (75%) was well above the overall private percentage. Finally, for the "none" replies, the Southwest (67%), the Rocky Mountains (57%), and the Far West (57%) surpassed the nationwide forty-two percent public average, while the Mideast (71%) and the Great Lakes (66%) greatly exceeded the total private figure.

In light of the foregoing, it is reasonable to conclude that the fields of State and local government receive rather limited attention in college and university introductory political science courses. Analysis of the regional breakdown of responses to questions dealing with the extent of treatment and the proportion of reading and lecture time given to State and local government reveals that institutions in the Mideast, the Great Lakes, and the Rocky Mountains generally exceeded the national average for devoting no attention to these subject areas. For the "some" or "less than one-fourth" category, New England and the Far West were usually above the overall figure. The nationwide proportion for the "substantial" or "one-fourth or more" group was frequently surpassed by the Southwest and the Southeast, and occasionally by the Rocky Mountains. In terms of the private-public control variable, there were no significant regional departures from the overall 60-40 private-public percentage division for the survey respondents.

Overall Intermediate and Advanced Treatment: To probe the extent to which political science curricula deal with State and local government as well as with intergovernmental relations at the intermediate and advanced levels, chairmen were requested to cite the number of courses in these fields offered by their institutions. Since the Advisory Commission was concerned with courses which were wholly or predominantly devoted to each of these subjects, the following classification was used: State government, local government, State-local government, and intergovernmental relations. At the outset, however, it was recognized that reliance on this breakdown might present some problems for chairmen of political science departments in which course offerings followed the currently popular "process"—rather than the more traditional "institutional"—approach. It also was understood that in some colleges and universities these subjects were studied within the context of public administration, economics, history, sociology, or interdisciplinary courses, rather than receiving exclusive attention as separate course designations. Replies from chairmen who indicated that State and local government and intergovernmental relations were treated in such a manner by their department did not lend themselves to tabulation.

Chairmen were asked the total number of intermediate and advanced courses in State and local government and intergovernmental relations given by their department. Over thirty percent of the departments responding offered a course in one of the above areas, while nearly twenty-one percent had no such courses in their political science curriculum (see Table 4). The remaining forty-nine percent represented departments which had two or more courses in these fields, with about eighteen percent having two courses, nine percent—three courses, and twenty-two percent—four or more courses.

As contrasted with the findings relating to basic courses, the number of intermediate and advanced offerings was closely associated with institutional size. Table 4 demonstrates that colleges and universities having a total enrollment of less than 3,500 were well above the national average for having no courses in State and local government and intergovernmental relations. At the same time, those under 2,000 far outdistanced the overall figure for the "one course" category. Institutions with an enrollment of 3,500 or over exhibited a marked tendency to have two or three courses in these subject areas, and those over 5,000 significantly exceeded the nationwide average for the "four or more" group.

In terms of the regional breakdown, Appendix Tables E1-E8 show that institutions in the Plains (27%) and the Southeast (26%) were well above the national average (20.7%) for having no course offerings in State and local government and intergovernmental relations, while the Southwest (5%) was no where near this mark. The intraregional division for the "one course" category finds New England (37%), the Mideast (35%),

and the Great Lakes (34%) slightly above the overall figure (30.3%), and the Rocky Mountains (16%), the Far West (25%), and the Southeast (26%) under this level. For the “two courses” group, while the Midwest (28%), the Southwest (25%), and the Southeast (19%) surpassed the national average (18.2%), all of the remaining regions except the Great Lakes (17%) ranged from five to thirteen percentage points below this benchmark. The “three courses” category was relatively evenly spread, with only New England (16%), the Midwest (6%), and the Rocky Mountains (5%) significantly diverging from the overall percentage (9.3%). Finally, for the “four or more” group, institutions in New England (16%) and the Midwest (15%) scored well below the national average (21.5%), while those in the Rocky Mountains (53%), the Far West (28%), and the Southwest (27%) exceeded this figure.

Dividing the responses in accordance with the public-private factor reveals that only eighteen percent of the “no course” offerings fell into the public category. State-supported institutions in the Southwest (50%), the Rocky Mountains (50%), and the Midwest (33%), however, departed dramatically from this overall pattern. The eighty-two percent private average was surpassed by New England (100%), the Great Lakes (95%), and the Far West (92%). “One course” replies divided on a 22-78 public-private percentage basis. The Southeast (31%) was well above the former, and New England (93%) and the Great Lakes (88%) outstripped the latter. The public-private percentage was evenly split for the “two courses” category, with all regions except New England (25%), the Midwest (33%), and the Great Lakes (43%) exceeding the public figure, while the opposite effect was discernible for the private sector. Variances from the 61-39 public-private percentage breakdown for the “three courses” group included public replies from the Far West (83%) and the Southwest (80%), while New England, the Midwest, and the Great Lakes, divided evenly in terms of public-private control. Finally, for the “four or more courses” column, the 70-30 public-private percentage

division was equalled or surpassed by institutions in all regions except the Mideast (37%-63%) and New England (50%-50%).

State-Local and Local Government: Dividing these non-basic courses into four separate categories—State-local government, local government, State government, and intergovernmental relations—provides a clearer view of the extent to which these subjects are covered at the intermediate and advanced levels in political science departments. Tables 5 through 8 reveal that State-local government and local government receive considerably more attention than State government and intergovernmental relations. Table 5 shows that forty-seven percent of the chairmen responding to this item indicated that their department gave only one intermediate or advanced course in State-local government, and a nearly equal number replied that no such courses were included in their curriculum.

In terms of institutional size, generally no meaningful relationships can be found. Witness the fact that the smallest and largest enrollment categories ranked highest in the “no course” column, and the same two groups ranked lowest in the “one course” column. The only real exception to this finding is the clustering of replies from institutions over 5,000 in the “two” and “three courses” categories. The “four or more courses” percentages were grouped exclusively within the middle-size sector.

From Appendix Tables F1-F8, it is apparent that no marked intraregional differences appear among the “no course” responses; only colleges and universities in the Plains States (53%) departed to any marked degree from the national figure (46.5%) for this category. For the “one course” group, the overall average (47.2%) was outdistanced by New England (55%), the Great Lakes (54%), and the Mideast (52%), and underrepresented by the Plains (36%), the Rocky Mountains (37%), and the Southeast (42%). The breakdown for

Table 5

the “two or more courses” replies reveals that only the Rocky Mountains (21%), the Plains (11%), and the Southeast (11%) outstripped the national aggregate (6.3%) to any significant extent.

The public-private divisions show that four of the eight regions do not diverge markedly from the 36-64 public-private percentage split on the “no course” responses. The major deviations from this pattern were private colleges and universities in New England (94%) and the Mideast (71%), and public institutions in the Southwest (68%) and the Rocky Mountains (75%).

A roughly parallel division of replies is highlighted in Table 6, which shows the number of intermediate and advanced courses in local government included in political science curricula. In this case, however, a greater number of chairmen—nearly fifty-five percent—stated that no courses were offered in this field. The remaining answers were more evenly distributed than those relating to courses in State-local government: about twenty-seven percent indicated that they had one local government course; eleven percent—two courses; three percent—three courses; and five percent—four or more courses.

In terms of institutional size, the pattern of “no course” responses in general suggests that the smaller the enrollment the greater likelihood that local government courses are not offered. For the “one course” and “three courses” categories, no consistent progression in relation to size is shown. The table reveals some relationship between greater size and the tendency to offer two courses, and a definite association between these two factors in the “four or more courses” column.

Appendix Tables G1-G8 indicate a greater tendency, relative to the national average (54.8%), for Plains (61%), Southeastern (62%), and New England (61%) institutions not to have any local government courses. On the other hand, the Southwest (59%) and the Mideast (54%) provided the best showings for institutions

offering at least one course in this field. Significant variances from the overall 24-76 public-private division of responses for the "no course" category occurred in five regions: New England (9% public-91% private), the Great Lakes (8% public-92% private), the Far West (17% public-83% private), the Southwest (33% public-67% private), and the Rocky Mountains (60% public-40% private).

State Government and Intergovernmental Relations: When compared to the other fields covered in this survey, State government and intergovernmental relations are the most neglected areas of teaching at the intermediate and advanced levels (See Tables 7 and 8). In seventy-three percent of the responding political science departments, no State government courses were provided, while in nearly seventy-seven percent no intergovernmental relations courses were given. Only nineteen percent of the State government and eighteen percent of the intergovernmental relations answers fell within the "one course" category.

The breakdown of replies in Table 7 by enrollment indicates a fairly clear progression between greater institutional size and the tendency to offer one or more courses in State government. The figures in Table 8 depict a somewhat similar pattern, although the comparatively high proportion of "no course" replies from the 10,000-14,999 class constitutes the chief factor qualifying this generalization.¹¹ Both tables show a clear pattern in which colleges under 3,500 far exceed the national average for "no course" offerings and fall well below the overall figure for the "one course" category.

¹¹ Another variable affecting the number of courses in State government is the legislative requirement that publicly-supported institutions provide a course dealing with the government of their State—one which all students or only those enrolled in certain degree programs must complete in order to graduate. Comments on introductory, intermediate, and advanced level reading assignments indicate that courses are offered in the government and/or politics of about one-half of the States. Inquiries to selected chairmen of political science departments, however, reveal that only seven States—Georgia, Illinois, Michigan, Nevada, South Dakota, Texas, and Wyoming—have laws which mandate the teaching of a course in the government and/or politics of the State at the college level.

Appendix Tables H1-H8 reveal that institutions in the Southwest (41%), the Rocky Mountains (40%), and the Far West (39%) were far more likely, relative to the overall national average (26.7%), to offer one or more State government courses. By way of contrast, the Midwest (20%) and New England (18%) were the main regions which ignored this subject area in their intermediate and advanced level political science courses. Nevertheless, as indicated in Appendix Tables I1-I8, the Rocky Mountains (40%) and New England (34%) far outdistanced the national percentage (23.3%) for one or more course offerings in intergovernmental relations, while institutions in the Plains States (83%), followed closely by the Midwest (81%), provided the largest clusterings of “no course” replies.

Analysis of these Appendix Tables in terms of the public-private variable shows, with respect to State government, that public institutions in the Rocky Mountains (58%) and the Southwest (42%) significantly exceeded the overall public proportion (29%) for “no course” offerings, while New England (87%) and the Great Lakes (82%) were well above the overall private sector figure (71%). The breakdown for “no course” in intergovernmental relations also shows four regions departing dramatically from the public-private nationwide division (35%-65%): New England (8%-92%), the Great Lakes (23%-77%), the Southwest (53%-47%), and the Rocky Mountains (58%-42%).

To summarize, the regional breakdown of responses to a series of questions concerning the number of intermediate and advanced course offerings in State-local government, local government, State government, and intergovernmental relations indicates that the Plains and the Southeast generally surpassed the national average for having no courses in these subject areas. On the other hand, the Southwest and the Rocky Mountains usually exceeded the overall figure for the “one or more” courses group, although New England was occasionally above the average.

As contrasted with the findings for introductory courses, the private-public percentages for intermediate and advanced offerings deviated sharply from the overall 60-40 private-public breakdown for survey respondents. Each category of reply to the question dealing with the total number of such courses in State and local government and intergovernmental relations divided as follows: no course—82% private-18% public; one course—78%-22%; two courses—50%-50%; three courses—39%-61%; and four or more courses—30%-70%. For the four specific intermediate and advanced courses surveyed, the various “none” responses were distributed on the following private-public basis: 64%-36%—no State-local government courses; 76%-24%—no local government courses; 71%-29%—no State government courses; and 65%-35%—no intergovernmental relations courses. These findings suggest strongly that publicly-supported colleges and universities give proportionately more attention to these fields than institutions which are under private control.

Conclusions

This survey’s findings lead to an inescapable conclusion that the fields of American State and local government and intergovernmental relations receive second-rate treatment in today’s college and university political science curricula. While a majority of political science departments give some attention to State and local government in introductory reading assignments and lectures, a strong minority ignore these areas at this level. Equally significant, only a handful report really substantial coverage of these critical subjects in their basic courses.

The situation at the intermediate and advanced course levels is even more bleak. A majority of the responding departments have no courses which focus wholly or partially on local government. This may be accounted for in part by the tendency among larger universities to deal with these subjects in separate centers for governmental research and urban studies. Finally, the survey responses dramatically document the fact that State government and intergovernmental relations are indeed the “dark continents” of teaching at the college and university level, with about three-fourths of the 562 responding departments offering no course in either field.

Why do State and local government and intergovernmental relations receive so little instructional focus in higher educational institutions? Why this scant attention in light of the growing appeal of these areas as research topics? The summary tables and appendices suggest strongly that the degree of specialization called for here is for the most part only feasible in larger institutions. Some survey respondents explained that their failure to offer such courses was due to difficulties in obtaining teaching personnel with the requisite qualifications. Another possible reason suggested in certain questionnaire responses is the tendency of the “process” approach in developing political science departmental curricula to ignore or to treat slightly these intergovernmental subject areas, since they are rooted in an institutional framework and in some cases are taught by so-called “traditionalists.”

Going beyond the questionnaire, courses in these areas generally—and roughly since World War II—have been unable to compete successfully with the glamor of international relations, underdeveloped areas, comparative political systems, American national government, and political parties and behavior. The virtual neglect of State government and intergovernmental relations could be attributed to the fairly low visibility of these fields until fairly recently. The complex and interdisciplinary nature of intergovernmental relations and the low esteem in which many political scientists hold State government might well be additional reasons for this neglect. The somewhat greater popularity of State-local and local government courses could be a reflection of increasing concern on the part of both public officials and scholars with the far-reaching implications of the “crisis of the cities.” The enthusiasm of some academicians for community power structure studies also might be a factor explaining the relatively larger number of courses in these subject areas. On the other hand, many offerings in State-local and local government could well be simply leftovers from the “traditionalist” period, with their current inclusion in political science curricula attributable more to custom and convenience than to actual need and demand.

Conjectures notwithstanding, the survey underscores the fact that, with respect to the teaching role of colleges and universities, State and local government and intergovernmental relations have not really entered—or, from the vantage point of the twenties and thirties, reentered—the “mainstream” of the political science discipline. It is equally clear that for a number of good reasons these fields deserve far more attention than they are currently receiving. Not the least of these reasons is the crucial role of higher educational institutions as training grounds for future public servants. Moreover, students and instructors cannot really come to grips with the roots of the urban crisis, the plight of rural America, and the pathology of racial discord if the intergovernmental dimensions of these critical public policy questions are ignored in the classroom.

APPENDIX A-1

ACIR-APSA QUESTIONNAIRE

(To Departmental Chairmen)

1. To what extent does your introductory course in Political Science include treatment of American State and local government?

None _____ Some _____ Substantial _____

Please indicate the duration of the introductory course:

one (semester, quarter, trimester) _____

two (semesters, quarters, trimesters) _____

three (semesters, quarters, trimesters) _____

four (semesters, quarters, trimesters) _____

2. What approximate proportion of the lecture time is allocated to State and local government?

one half _____ one fourth _____

one third _____ less than one fourth _____

none _____

3. What approximate proportion of the course-related reading is given over to State and local government?

one half _____ one fourth _____

one third _____ less than one fourth _____

none _____

4. What works are used for introductory reading assignments in State and local government?

Author

Book

5. How many intermediate or advanced courses in the field of American State and/or local government and intergovernmental relations does your department offer?

_____ (cite total number) _____ in local government
_____ in State government _____ in State and local government
_____ in intergovernmental relations

6. What works are used for reading assignments in such intermediate or advanced courses? (After each title, please use the appropriate course designation: (I) = Intergovernmental Relations; (S-L) = State and Local Government; (S) = State Government; (L) = Local Government).

Author

Book

7. How useful have ACIR reports been in courses concerning American State and/or local government?

Very useful _____ Occasionally useful _____ Not useful _____

In intergovernmental relations courses?

Very useful _____ Occasionally useful _____ Not useful _____
