Preface

A significant portion of the research for the Commission's 14-volume series, *The Intergovernmental Grant System: An Assessment and Proposed Policies*, published in 1977-78, was the identification and counting of federal grant programs as of January 1, 1975. The results were published in ACIR Report A-52a, *A Catalog of Federal Grant-in-Aid Programs to State and Local Governments: Grants Funded FY 1975*, and were updated three years later in ACIR Report A-72.

This volume is the second updating of the original inventory, covering Congressional action over the three-year period January 1, 1978, through December 31, 1980. It provides a snapshot of the scope and major features of federal grant programs as of the end of the Carter Administration.

Chairman

Acknowledgments

This report was prepared by Albert J. Richter, senior analyst, and Marvis Dancy, secretary, of the governmental structures and functions section of the Commission staff.

The Commission gratefully acknowledges the cooperation of the representatives of 26 federal departments and agencies who verified and corrected data contained in a preliminary draft. Full responsibility for content and accuracy rests, of course, with the Commission and its staff.

Appendix A. Categorical Grant Programs Consolidated by Block Grants under the Omnibus Budget Reconciliation Act of 1981	67

Federal Grant-in-Aid Programs to State and Local Governments: Grants Funded FY 1981

The number of federal categorical grant-in-aid programs available to state and local governments stood at 534 as of January 1, 1981, according to a tally made by the ACIR staff. This represents an increase of 42, or about 9%, over the 492 counted three years earlier. It is less than the 11% increase registered in the previous three-year period from 1975 to 1978.

It seems likely, moreover, that because of the consolidation of categoricals effected by the creation of nine block grants by the *Omnibus Budget Reconciliation Act of 1981*, and further consolidations projected by the Reagan Administration for FY 1982 and later, 1981 will go down as the high water mark for categorical grants. The nine new block grants replaced 77 categorical programs. These blocks and the consolidated categoricals are shown in Appendix A.

As of January 1, 1981, there were four block grants: the Health Incentive Grant for Comprehensive Public Health Services, Comprehensive Employment and Training Services (CETA), Community Development, and Social Services. A fifth recent block grant—Law Enforcement Assistance—was discontinued in FY 1981. Three of the four existing blocks were involved in the block grant action under the *Omnibus Budget Reconciliation Act of 1981*. The Comprehensive Health Services block was absorbed by the new Preventive Health and Health Services block grant; the new Social Services block is a modified version of the previously existing Social Services

block grant; and the new State Community Development block is a modification of a discretionary grant enacted as part of the *Housing and Community Development Act of 1974*, which created the basic Community Development block grant program.

534 CATEGORICALS

The 534 categorical grants funded as of January 1, 1981, are listed in the body of this catalog—an update of the ACIR's 1975 and 1978 catalogs.¹ While the categoricals are the focus of the following analysis, they are preceded in the listing by the four block grants funded as of the beginning of 1981.

Categorical grants are directed at specific, narrowly defined activities. Block grants are distributed in accordance with a statutory formula for use in a variety of activities within a broad functional area largely at the recipient's discretion. A third type of financial assistance to state² and local governments—General Revenue Sharing—is not included in this catalog.

Table 1 shows the breakdown among the four major types of categorical grant programs for the three points of time covered by the ACIR catalogs. The four types are described in the later section on "Data Included."

MAJOR INCREASE IN PROJECT GRANTS

As between formula-based and project grants, practically the entire increase in number of programs between fiscal years 1978 and 1981 was accounted for by project grants—an increase of 39 compared to a rise of only three in the number of formula-based programs. Thus, project grants' share of the total number of categorical grants went up from 65.4% to 67.6% while the formula-based proportion dropped from 34.6% to 32.4% from FY 1978 to FY 1981.

The net increment of three formula-based grants resulted from the addition of 45 programs by Congressional enactment or funding of previously authorized but unfunded programs, and the discontinuance, replacement, or termina-

tion of funding of 42 programs that existed in 1968. The 45 added programs included the recipient's expenditure or program level as a factor more often in the allocation formulas than was the case with the dropped programs; the same was true for factors requiring an equal or minimum amount to be distributed to each recipient. On the other hand, land area appeared less often as a formula factor, as did per capita income.

The net increase of 39 project grant programs reflected the addition of 131 newly authorized and/or funded programs and the dropping of 92 programs that had been operational in 1978.

CHANGES IN FUNCTIONS, MATCHING, RECIPIENTS

On a functional basis, the greatest net increases in number of programs occurred in social services (19) and energy conservation (10). The social services increases reflect mainly the addition of seven new Older Americans and eight new rehabilitation services and facilities programs. The greatest net decreases were in ground transportation (-10) (a mixture of urban highway, mass transportation, beautification, and safety programs), and the administration of justice (law enforcement and criminal justice).

Table 2 shows the changes in the number of categorical programs between fiscal years 1978

and 1981, by functional and subfunctional title and code number used in the federal budget.

The three-year period witnessed a continuation of the decline in the proportion of grant programs requiring nonfederal matching. In 1975 these constituted about 62% of all programs; in 1978, about 57%; and in 1981, about 54%. The reduction in these proportions from 1978 to 1981 was greater for formula-based than for project grants. The breakdown by type of grant for the two years is shown in Table 3.

The pattern of aid recipients also changed. Programs going to "states, localities, and other" increased from 42.3% in 1978 to 46.3% in 1981, reflecting the greater use of nonprofit organizations, which are the main component of "other". The nonprofits are frequent recipients of project grants in the human services area. The distribution of grant programs by type of eligible recipients for the two years is also shown in Table 3.

By major grant-administering department or agency, the largest increases in number of grants administered were registered by the Department of Education (34) and the Department of Energy (11). The sharpest declines occurred in the Department of Transportation (-15) and the Department of Justice (-7). The breakdown by department or agency is shown in Table 4. The sizeable increase indicated for the Federal Emergency Management Agency stems from the fact that it is a new agency administering programs previously assigned to several other departments and agencies.

Methodology

The methodology used in counting grant-in-aid programs was basically the same as that followed in compiling the first ACIR catalog for FY 1975. For ease of reference the explanation contained in the earlier volume is repeated here with appropriate changes.

ACIR used a slightly modified version of the definition of grants-in-aid used by the Office of Management and Budget (OMB) in its instructions (Circular No. A-11, Revised) to executive agencies for the preparation and submission of budget estimates. Following is OMB's definition.

Grants-in-aid are defined as budget authority and outlays by the federal government in support of state or local programs of government operations or provision of services to the public. . . .

Grants-in-aid include:

(a) Direct cash grants to state or local governmental units, to other public bodies established under state or local law, or to their designee (e.g., federal aid for highway construction).

(b) Payments for grants-in-kind, such as purchases of commodities distributed to state or local governmental institutions (e.g., school lunch programs).

(c) Payments to nongovernmental entities when such payments result in cash or in-kind services or products that are passed on to state or local governments (e.g., payments to the Corporation for

Public Broadcasting or to the American Printing House for the Blind).

(d) Payments to regional commissions and organizations that are redistributed at the state or local level to provide public services.

(e) Federal payments to state and local governments for research and development that is an integral part of the state and local governments' provision of services to the general public (e.g., research on crime control financed from law enforcement assistance grants or on mental health associated with the provision of mental rehabilitation services). (See (i) and (j) below for exclusions related to research and development.)

(f) Shared revenues, a subcategory of grants. These payments to state or local governments are computed as a percentage of the proceeds from the sale of certain federal property, products, or services (e.g., payments from receipts of Oregon and California grant lands) or are tax collections by the federal government that are passed on to state or local governments (e.g., internal revenue collections for Puerto Rico).

Excluded under this definition are:

(g) Federal administrative expenses associated with these programs.

(h) Grants directly to profit-making institutions, individuals, and nonprofit institutions not covered above (e.g., payments to Job Corps Centers and trainees).

(i) Payments for research and development not directly related to the provision of services to the general public (e.g., basic research).

(j) Payments for services rendered (e.g., utility services, training programs and expenses for federal employees, research and development for federal purposes conducted under contracts, grants, or agreements by such agencies as the National Institutes of Health, the National Science Foundation, the Department of Energy, the National Aeronautics and Space Administration, and the Department of Defense).

(k) Federal grants to cover administrative expenses for regional bodies and other funds not redistributed to the

states, or their subordinate jurisdictions (e.g., the administrative expenses of the Appalachian Regional Commission).¹

The OMB definition is used here with the following exceptions: shared revenues and payments in lieu of taxes have been excluded, and programs of aid to institutions of higher education have been included only if the aid is exclusively to public institutions of higher education or if state or local governments have a role in the process.

Programs meeting these criteria were identified by a thorough search of the *United States Code, 1976 Edition, Supplements II (1978) and III (1979)* and *United States Code, Congressional and Administrative News, 96th Congress, 2nd Session*. Supplementary documents were used to determine if programs were operational, most particularly the *Catalog of Federal Domestic Assistance*, prepared by the Office of Management and Budget, and *The Budget of the United States Government, 1982, Appendix*.

Since there are no accepted rules for determining when an authorized activity is a separate program, counting the number of grants is not a simple task. A single statute often authorizes a number of separate, albeit related programs. Other statutes combine activities which, because of funding, operation, or administration, are actually separate programs. Some programs are authorized as earmarked activities under an authorization for a broader activity, or several alternate activities may be listed as permissible under one program. Such program authorities were not disaggregated here for the purpose of counting unless supplementary sources indicated the desirability to do so.

After a preliminary inventory was made using the above procedure, listings were sent to the departments and agencies administering the grants for confirmation or correction. Replies were received from all 26 of the units canvassed. Their responses were checked against statutory references as necessary. Finally, the entire list was checked against the 1981 *Catalog of Federal Domestic Assistance*, which was distributed in July 1981.

Data Included

The present ACIR catalog lists the block and categorical grant programs funded on January 1, 1981. The programs are listed by budget subfunction number and within that number by the corresponding number assigned by the OMB *Catalog of Federal Domestic Assistance*. The following information is shown for each program:

- 1) budget subfunction classification and title,
- 2) U.S. Code reference,
- 3) grant type (method of distribution),
- 4) formula factors,
- 5) eligible grant recipients,
- 6) maximum federal share,
- 7) administering agency, and
- 8) *Catalog of Federal Domestic Assistance* number.

The following brief descriptions of these terms may help the reader in using the catalog.

Budget Subfunction—These are the subfunctional categories and numbers that appear in *The Budget of the United States Government, FY 1982, Part 8*.

Grant Type—Formula grants employ a formula to determine each eligible recipient's allotment. Project grants require competitive applications from aspiring recipients. In some cases, competition for project grant funds is constrained by a formula that may, for instance, determine how

much money applicants within each state may receive. These grants are termed formula-project grants. Twenty of the 173 formula and formula-project grant entries are asterisked to indicate their open-end character. These cost-reimbursement grants do not use formulas as such to allocate a fixed amount of money, but rather commit the federal government to reimburse recipient cost at a specified rate.

Formula Factors—These are the kinds of data used to calculate a recipient's maximum allotment. Total population, population subgroups, program level, per capita personal income, and land area are separately identified. In addition, per capita income when used to modify some other formula factor is shown. Provisions for minimum or maximum allotments, as well as "hold-harmless" provisions are also indicated.

Federal Share—The numbers listed in this column indicate the maximum percentage of program costs to be paid by federal funds. The number "100" indicates a grant with no matching requirements. This, however, does not mean the federal grant actually covers 100% of the cost of

the aided program or activity. It only means the recipient is not required to match any portion of the federal grant. The "cost-shared" (CS) category includes all those grants where some recipient contribution is required, but the exact amount is not specified. In such cases, the match may be the subject of negotiation, or may be set by the Secretary. Other symbols are used to indicate when a matching ratio is variable for different recipients, changes over time, or is different for different activities or types of recipients.

Agency—This column indicates the responsible administering agency for each grant. Except for the Department of Health and Human Services, subdepartmental units are not indicated.

CFDA No.—This is the number assigned the program in the 1981 *Catalog of Federal Domestic Assistance*.

The key on the following page lists and explains the full range of entries for type of grant, formula factors, recipient, federal share, and administering agency.

what is ACIR?

The Advisory Commission on Intergovernmental Relations (ACIR) was created by the Congress in 1959 to monitor the operation of the American federal system and to recommend improvements. ACIR is a permanent national bipartisan body representing the executive and legislative branches of Federal, state, and local government and the public.

The Commission is composed of 26 members—nine representing the Federal government, 14 representing state and local government, and three representing the public. The President appoints 20—three private citizens and three Federal executive officials directly and four governors, three state legislators, four mayors, and three elected county officials from states nominated by the National Governors' Association, the National Conference of State Legislatures, the National League of Cities/U.S. Conference of Mayors, and the National Association of Counties. The three Senators are chosen by the President of the Senate and the three Congressmen by the Speaker of the House.

Each Commission member serves a two year term and may be reappointed.

As a continuing body, the Commission approaches its work by addressing itself to specific issues and problems, the resolution of which would produce improved cooperation among the levels of government and more effective functioning of the federal system. In addition to dealing with the all important functional and structural relationships among the various governments, the Commission has also extensively studied critical stresses currently being placed on traditional governmental taxing practices. One of the long range efforts of the Commission has been to seek ways to improve Federal, state, and local governmental taxing practices and policies to achieve equitable allocation of resources, increased efficiency in collection and administration, and reduced compliance burdens upon the taxpayers.

Studies undertaken by the Commission have dealt with subjects as diverse as transportation and as specific as state taxation of out-of-state depositors; as wide ranging as substate regionalism to the more specialized issue of local revenue diversification. In selecting items for the work program, the Commission considers the relative importance and urgency of the problem, its manageability from the point of view of finances and staff available to ACIR and the extent to which the Commission can make a fruitful contribution toward the solution of the problem.

After selecting specific intergovernmental issues for investigation, ACIR follows a multistep procedure that assures review and comment by representatives of all points of view, all affected levels of government, technical experts, and interested groups. The Commission then debates each issue and formulates its policy position. Commission findings and recommendations are published and draft bills and executive orders developed to assist in implementing ACIR policies.
