## A COMMISSION SURVEY

Commission on Intergovernmental Relations

WASHINGTON, DC 20575
S-16

## Foreword

This publication presents the 16 th annual survey of public attitudes toward government and taxes conducted for the Advisory Commission on Intergovernmental Relations (ACIR).

The Gallup Organization has conducted the polls since 1983 using the Gallup Personal Omnibus. Every effort was made to ensure comparability with the previous surveys conducted by Opinion Research Corporation of Princeton, NJ. A description of the poll appears on page 8. Users should note that for 1987, the sample size is 1,044 , and the sampling tolerances are slightly larger than in years preceding 1986.

This year ACIR asked eleven questions. This publication presents both the current results and cumulative record since 1982. It contains an appendix listing all the questions which have been asked since 1972 and the tables in which detailed data on responses can be found. Data on questions asked in the 1972-81 surveys may be obtained by requesting copies of the 1983 or 1984 reports ( $\mathrm{S}-12$ and $\mathrm{S}-13$ ) which present the data in Appendix III.

John Kincaid, research director, directed the 1987 study. It was prepared by Susannah E. Calkins, senior analyst, with the assistance of Lena Huang. Members of the ACIR staff participated in developing the questions and in reviewing the results.

We wish to express our gratitude to Steven and Linda Bennett, Richard Goode, Mavis Reeves, Robert Savage and Larry Sabato for their assistance in reviewing the poll results, and to numerous others who assisted in the development of the questions.

All interpretations of the data are those of the ACIR staff.

John Shannon<br>Executive Director

# The 1987 Survey 

highlights

According to a June 1987 poll on changing public attitudes toward governments and taxes, commissioned by the U.S. Advisory Commission on Intergovernmental Relations:

- Local governments score high in public trust and confidence.
- Many Americans ( 45 percent) believe that the federal government has too much power over the activities of state and local governments today.
- The public is almost evenly divided on whether they get the most for their tax money from the federal government, state government, or local government-with one fifth saying they don't know.
- Of the nation's federal, state, and local governments, however, two-thirds of the public believe that the federal government wastes the most of their tax money.
- Of the major taxes levied by governments in the federal system, the federal income tax is most often viewed as the worst tax (i.e., the least fair), although the percentage of respondents choosing the federal income tax as the worst tax dropped from 37 percent in 1986 to 30 percent in 1987.
- If governments need to raise a small amount of additional revenue, Americans would more likely prefer a national lottery as a federal revenue source, an increase in cigarette and liquor taxes as a state revenue source, and an increase in user fees as a local revenue source.

This 1987 public opinion survey is the 16th annual poll commissioned by the ACIR.

## Trust And Confidence In The People Running Government

Responses to a number of questions in this year's ACIR poll suggest that local governments stand high in public esteem.

In a new question posed this year, respondents were asked to choose whether they have the most trust and confidence in the people in charge of running the federal government, their state government, or their local government (see Table I). Thirty-seven percent of the respondents expressed the most trust and confidence in the people in charge of running their local government. The people in charge of running state government received 22 percent of the trust-and-confidence vote, and the people in charge of running the federal government got 19 percent of the trust-andconfidence vote. It should be noted, however, that more than one-fifth ( 22 percent) of the respondents did not make a choice. Looked at another way, of those respondents who did make a choice, 47 percent expressed the most trust and confidence in the people in charge of running their local government.

In terms of groups within the sample population, nonwhites ( 28 percent) were more likely than whites ( 17 percent) to choose those in charge of running the federal government as being the people in whom they have the most trust and confidence. Conversely, whites (39 percent) were more likely than nonwhites ( 20 percent) to express the most trust and confidence in the people in charge of running their local government. Otherwise, groups expressing markedly above-average trust and confidence in the people running local governments included respondents having

some college education ( 45 percent), those having an income between $\$ 30,000$ and $\$ 39,999$ ( 46 percent), employed women ( 45 percent), and respondents living in the nation's North-Central region (44 percent).

## Trust And Confidence In The Ability Of Governments To Carry Out Their Responsibilities

Asking respondents to choose the one government in whose officials they have the most trust and confidence can give a misleading picture of public attitudes because a choice of one government does not necessarily mean that respondents lack trust and confidence in the other governments. Members of the public may have equally high or low levels of trust and confidence in two or three of the principal governments in the federal system. To test for this possibility, respondents were asked about how much trust and confidence they have in the ability of each of the three types of government to do a good job in carrying out its responsibilities. Respondents were given four choices, ranging from "a great deal" to "none at all" (see Table 2).

Sixteen percent of the respondents reported that they have "a great deal" of trust and confidence in the ability of their local government to
carry out its responsibilities. Eleven percent said that they have "a great deal" of trust and confidence in their state government, and 9 percent said that they have "a great deal" of trust and confidence in the federal government. Although local government again scores comparatively high in public esteem, if one combines the results in the first two columns of Table 2, one sees that more than two-thirds of the respondents expressed "a great deal" to "a fair amount" of trust and confidence in each type of government to carry out its responsibilities. At the other end of the scale, only small percentages of respondents reported that they have no trust and confidence at all in any of the three governments.

Striking differences were evident between the attitudes of whites and nonwhites toward government. The percentage of nonwhites who reported that they have no trust and confidence at all in government to do a good job consistently exceeded the sample average: 15 percent expressed no trust and confidence in the federal government, 10 percent reported no confidence in state government, and 18 percent expressed no confidence in local government. The percentages of nonwhites reporting "a great deal" of trust and confidence were 5 percent for the federal government, 6 percent for state government, and 5 percent for local government.

Too Much Power<br>46

The Right Amount of Power 37
Too Little Power 7
Don't Know 10
(Detailed data appear in Appendix I, Table 20, page 33.)

In sum, when asked to choose the one government in whose officials they have the most trust and confidence, respondents were more likely to choose local government, although a sizable number of respondents ( 22 percent) declined to make a choice, and thus fell into the "Don't Know" category. However, when asked about the ability of each government individually to carry out its responsibilities, few respondents fell into the "Don't Know" category, and more than twothirds expressed "a great deal" to "a fair amount" of trust and confidence in the federal government, their state government, and their local government.

## Federal Power Over The Activities Of State And Local Governments

A cardinal question of the federal union is the balance of power among the nation's federal, state, and local governments. In light of this year's commemoration of the bicentennial of the signing of the United States Constitution, the ACIR poll included a question on whether the federal government has too much, the right amount, or too little power over the activities of state and local governments today.

Forty-six percent of the respondents said that they believe that the federal government has too much power over state and local government activities (see Table 3). Thirty-seven percent believe that the federal government has just about the right amount of power, while only 7 percent feel that the federal government has too little power. There were few noticeable differences among different groups of respondents on this question, although nonwhites ( 53 percent) were more likely than whites (44 percent) to say that the federal government has too much power. Similarly, re-
spondents from the South ( 51 percent) were slightly more likely than respondents from other regions to say that the federal government has too much power over the activities of state and local governments today. ${ }^{1}$

## From Which Level Of Government Do You Get The Most For Your Money?

Since 1972, the ACIR poll has asked: "From which level of government do you get the most for your money?" Just as in 1985 and 1986, the percentages of respondents saying that they get the most for their money from local government and from the federal government were about equal: 29 percent chose local government, and 28 percent chose the federal government (see Table 4). However, between 1986 and 1987, there was a four percentage-point drop in the proportion of respondents choosing each of the two. Those choosing local government dropped from 33 percent in 1986 to 29 percent in 1987 , and those choosing the federal government dropped from 32 percent in both 1985 and 1986 to 28 percent in 1987. The percentage of respondents saying that they get the most for their money from state government remained the same ( 22 percent) as in 1986 and 1985.

There was a sharp increase in 1987 in the percentage of respondents who said "Don't Know" to this question: from 13 percent in 1986 to 21 percent this year. This is the highest percentage of "Don't Know" responses recorded for this question since 1974, when the "Don't Know" response rate was 22 percent. Generally, it should be noted that, relative to most other questions in ACIR's polls, the number of "Don't Know" responses is consistently high for this question.
${ }^{1}$ A May 1987 CBS-New York Times Poll asked a related question: Does the federal government have too much power, do the state governments have too much power, or is the balance about right? Thirty-nine percent of the respondents felt that the federal government has too much power, 5 percent believed that the state governments have too much power, and 47 percent believed that the balance is about right.

| March 1972 | 39 | 25 | 18 | 17 |

(Detailed data appear in Appendix I, Tables 1-4, pages 10-14.

The question is admittedly difficult to answer. Respondents must, in effect, compare the services they receive from each government-and possibly the efficiency with which those services are deliv-ered-to the amount of "money" they perceive each government as receiving from them. Some respondents may also have difficulty choosing one government because they may feel that they get a great deal for their money from all three governments or not much at all from any government.

As in past years, the demographic data indicate that the respondents most likely to cite the federal government as the government from which they get the most for their money are those who are over age 65 ( 38 percent), retired ( 37 percent), or nonwhite ( 42 percent). The highest percentage of respondents choosing state government came from those aged 25-34 ( 32 percent). The respondents most likely to say that they get the most for their money from local government were college graduates ( 45 percent), the occupational category of professionals, managers, and owners (45 percent), and persons with annual incomes of $\$ 40,000$ or more ( 40 percent).

Regionally, respondents in the Northeast and West were more likely than respondents from other regions to say that they get the most for their money from local government. Respondents in the

South were more likely to cite the federal government, while those in the North-Central region divided almost equally on all three governments.

## Which Government Wastes The Most Of Your Tax Money?

As a counterpoint to the above question, the poll also asked respondents to choose which government wastes the most of their tax money. Twothirds of the respondents said that the federal government wastes the most of their tax money. Only 14 percent chose state government, and 8 percent chose local government (see Table 5). The respondents most likely to cite the federal government as being the most wasteful included the occupational category of professionals, managers, and owners ( 79 percent), persons with some college education ( 78 percent), persons who had graduated from college ( 76 percent), and respondents earning $\$ 40,000$ or more ( 76 percent).

Deviations from the total percentage ( 66 percent) citing the federal government as the most wasteful were equally noticeable on the low side. Only 39 percent of the nonwhite respondents as opposed to 70 percent of the white respondents said that the federal government wastes the most of their tax money. Similarly, 52 percent of the

(Detailed data appear in Appendix I, Table 9, page 22.
respondents who had not completed high school and 54 percent of those with incomes under $\$ 15,000$ chose the federal government as the most wasteful.

Although only 8 percent of all the respondents cited local government as the most wasteful, 17 percent of the nonwhite respondents and 13 percent of those with incomes under $\$ 15,000$ said that local government is the most wasteful. With regard to state government, chosen as wasteful by 14 percent of the respondents, there were no marked differences in responses among different demographic groups.

Interestingly, the percentage of "Don't Know" responses to this question ( 12 percent) is signifi-
cantly lower than the 22 percent given for the previous question. Evidently, respondents have an easier time deciding which government wastes the most of their tax money than they do deciding which government gives them the most for their tax money. The overwhelming number of respondents citing the federal government as the most wasteful may be due, in part, to the amount of media attention often given to alleged waste in the federal government, the large number of federal spending programs, and the sheer size of the federal government's budget compared to the size of the budgets of individual state and local governments.

(Detailed data appear in Appendix $I$, Tables 5-8, pages 16-20.

## Which Do You Think Is The Worst Tax-That Is, The Least Fair?

For the ninth straight year, the federal income tax has received the most votes as the worst tax in the ACIR poll. Thirty percent of the respondents chose it as the least fair tax, compared to 24 percent who chose the local property tax (see Table 6 ). The percent choosing the federal income tax as least fair showed a marked drop from 37 per-
cent in 1986 to 30 percent in 1987. This is the third time in the 16 years the poll has been conducted that there has been an abrupt change in public opinion on the federal income tax, and the first time that there has been such a large drop in the percentage of respondents choosing it as the worst tax.

The 30 percent selecting the federal income tax as the worst tax is the same as in 1978-the last year before a sharp increase in public disap

(Detailed data appear in Appendix I, Table 10, 14, 16, pages 23, 27, and 29.
proval. (Beginning in 1979, the public consistently ranked the federal income tax as the worst tax, exceeding by a substantial margin those who chose the local property tax.) The sharp drop in the percent choosing the federal income tax as the worst tax can possibly be attributed to the enactment of federal income-tax reform legislation in 1986.

Not unexpectedly, the lowest income groups were less likely than other income groups to choose the federal income tax as the worst tax, while higher income groups were more likely to choose it as the worst tax.

The percentage of respondents choosing the local property tax as the worst tax also dropped somewhat-from 28 percent in 1986 to 24 percent in 1987. Both state taxes-the state income tax and the state sales tax-seem to be slipping somewhat in public approbation, with both of them polling a higher percentage of votes as the worst tax in 1987 than in 1986. This change may be due to the considerable amount of state tax activity which has occurred since ACIR's 1986 poll. A number of states have increased taxes, and many states have discussed changes or increases in state taxes. However, in the absence of other questions probing the views of respondents, we cannot be certain about the reasons for the changes in public attitudes toward the four principal taxes levied by governments in the federal system.

## Raising Revenue For Federal, State, And Local Governments

A consistent finding of ACIR polls is the preference of the American public for raising government revenues in what might be regarded as the least painful way. This finding is clearly underscored by the responses to the three 1987 questions which ask how the public would prefer, if necessary, to raise a small amount of additional revenue for the federal, state, and local governments (see Table 7). In reading the responses to this question in Table 7, it should be noted that respondents were asked to choose from the specific revenue-raising mechanisms given for each type of government. The alternative of "No tax increase/No new taxes" was not given to respondents. Consequently, responses in this category were recorded only when respondents refused to choose a revenue-raising mechanism and specifically said that the government should not increase taxes or impose any new taxes.

If necessary, the public prefers a national lottery as a source of revenue for the federal govern-
ment ( 47 percent), an increase in cigarette and liquor taxes as a source of revenue for state government ( 54 percent), and an increase in user fees as a source of revenue for local governments ( 33 percent).

Preference for raising more federal revenue by a national lottery was higher in the Northeast region of the country ( 55 percent) than the national average of 47 percent. Residents of the Northeast are most familiar with lotteries because all of the states in that region have had state lotteries for several years. Older Americans were less supportive of a national lottery than the average, with only 33 percent of those over 65 years of age and 38 percent of retired persons choosing a lottery as a national revenue raiser.

The public's preference for raising more state revenue by increasing cigarette and liquor taxes varies by region. Percentages were high in the North Central region ( 60 percent) and the West ( 61 percent) in comparison to the national average of 54 percent. Nonwhites tended to be less supportive, with only 44 percent supporting an increase in cigarette and liquor taxes. (It should be noted that increasing the tax on beer was not specifically identified in the list of alternatives; responses by many groups might have been different if beer had been included along with liquor.)

More variation was found in choosing ways to raise a small amount of revenue for local government. User fees received the highest percentage of the vote- 33 percent. Persons with some college education ( 41 percent) and persons with incomes in the $\$ 30,000-39,999$ range ( 43 percent) were among the most likely to prefer increasing user fees. College graduates gave slightly larger than average support to user fees, but also gave greater than average support to sales taxes ( 30 percent compared to the U.S. average of 20 percent). For local government, nonwhites gave equal support to increasing user fees and the volunteered answer that there should be no tax increase ( 23 percent).

When the responses for federal, state, and local government are compared, the public shows significant variations in support for similar ways of raising additional revenue. Support for user charges was highest for local government ( 33 percent) compared to 16 percent for the federal government and 13 percent for states. Support for a sales tax (or increasing existing sales tax rates) was higher for local government ( 20 percent) than for either the federal government or state governments. The volunteered answer of "No tax increase/No new taxes" was also highest for local government.

## The Poll

This report presents the findings of a personal interview research survey conducted among a nationally representative sample of 1,044 men and women, 18 years of age or over, living in private households in the United States.

Interviewing for this survey was completed June 6-14, 1987, by members of the Gallup Personal Omnibus national interviewing staff. All interviews were conducted in the homes of respondents.

To ensure the representativeness of the sample, data were weighted to take into account demographic variables. Therefore, the results may be projected to the total adult civilian population, 18 years of age or over, living in the United States.

## Introduction To Detailed Findings

The tables contained in this report present detailed findings of the various survey results.

The following definitions are provided for some of the standard breakdowns by which the data are analyzed. Other breakdowns are selfexplanatory.

Occupation refers to the occupation of the respondent. The types of positions included in each category are listed below. The fourth classification is retired persons.

## Professional/Manager/Owner

Executives, Professionals, Technical and Kindred Workers, Managers, Officials, and Proprietors.
White Collar, Sales, Clerical Clerical, Office and Secretarial Workers, and Sales Agents and Workers.

## Blue Collar

Semi-Skilled, Laborers, And Service Workers: Craftsmen, Foremen, Kindred Workers, Maintenance Repairmen, Carpenters, Plumbers And Electricians; Operatives And Kindred Workers, Apprentices, And Assembly Line Workers; Housekeepers In Private Households, Institutional And Public; Police, Security Guards; Beauticians and Barbers.

Metro size groupings are determined by the U.S. Bureau of the Census population figures for the metropolitan area. Nonmetro areas are those not in a metropolitan area. Nonmetro areas are those not in a metropolitan area, with populations under 50,000. Central city areas have populations of 50,000 or more in a central city of a metropoli$\tan$ area. Fringe areas have populations of 50,000 or more in metropolitan areas outside a central city.

The four geographic regions are defined as follows: Northeast-Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania; North-Central-Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas; SouthDelaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, Texas; West-Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Hawaii, Alaska.

Income groups respondents by 1987 total household income before taxes.

Sampling tolerances for the survey are $\pm 4$ percentage points at the $95 \%$ level of confidence.

Further detail on the survey methods and sampling tolerances are available from ACIR.

## Previous Classifications And Results

Data for 1981-72 are presented in Appendix III, Detailed Results of 1981-72 Surveys (p. 41) of the 1984 public opinion volume ( $\mathrm{S}-13$ ) or the 1983 volume ( $\mathrm{S}-12$ ). Copies may be requested from ACIR. Descriptions of classifications used in these years may be found in the volumes for the relevant years.

Tables for 1987-1982 are presented in Appendix $I$ of this report (S-16).

Revised 1986 figures are underlined in the detailed tables.

If Federal Income Tax Collections Must Be Inereased, Which Way Is The Best?
(in percent)

1. Raise individual Income tax rates.
2. Cut back on current tax exemptions such as social security, penslons, interest on municipal bonds, etc.
3. Cut back on all itemized deductions, such as those for state and local taxes, interest paid on mortgages and consumer loans, and charitable contributions.
4. Don't know.

## If Your State Government Decided To Raise A Small Amount Of Additional Revenue To Help Meet Costs And Improve Services, Which One Of These Would You Prefer?

1. An increase in cigarette and liquor taxes.
2. An increase in the general state sales tax.
3. An increase in gasoline and dlesel fuel taxes.
4. An increase in state income tax rates, or an income tax if your state does not now have one.
5. An Increase in user fees or charges for things like the use of state parks, automoblle
registration, boating licenses, or toll roads.
6. (Volunteered) No tax increase/No new taxes.
7. Don't know/No answer.

Which One Of The Changes Would Be The Single Most Important Change That Would Make The Nation's Tax System More Fair?
(in percent)

1. Make the upper income taxpayers pay more.
2. Reduce taxes on lower income taxpayers.
3. Make business firms pay more even if it reduces the number of jobs.
4. Leave the tax system alone - it is about as fair as you are ever going to get.
5. None of the above.
6. Don't know.

## What is ACIR?

The Advisory Commission on Intergovernmental Relations (ACIR) was created by the Congress in 1959 to monitor the operation of the American federal system and to recommend improvements. ACIR is a permanent national bipartisan body representing the executive and legislative branches of Federal, state, and local government and the public.

The Commission is composed of 26 members-nine representing the federal government, 14 representing state and local government, and three representing the public. The President appoints 20 -three private citizens and three federal executive officials directly and four governors, three state legislators, four mayors, and three elected county officials from slates nominated by the National Governors' Association, the National Conference of State Legislatures, the National League of Cities/U.S. Conference of Mayors, and the National Association of Counties. The three Senators are chosen by the President of the Senate and the three Representatives by the Speaker of the House of Representatives.

Each Commission member serves a two-year term and may be reappointed.
As a continuing body, the Commission addresses specific issues and problems, the resolution of which would produce improved cooperation among the levels of government and more effective functioning of the federal system. In addition to dealing with the all-important functional and structural relationships among the various governments, the Commission has extensively studied critical stresses currently being placed on traditional governmental taxing practices. One of the long-range efforts of the Commission has been to seek ways to improve federal, state, and local governmental taxing practices and policies to achieve equitable allocation of resources, increased efficiency in collection and administration, and reduced compliance burdens upon the taxpayers.

Studies undertaken by the Commission have dealt with subjects as diverse as transportation and as specific as state and local taxation of out-of-state mail order sales; as wide ranging as the transformation in American politics to the more specialized issue of local revenue diversification. In selecting items for the research program, the Commission considers the relative importance and urgency of the problem, its manageability from the point of view of finances and staff available to ACIR, and the extent to which the Commission can make a fruitful contribution toward the solution of the problem.

After selecting specific intergovernmental issues for investigation, ACIR follows a multistep procedure that assures review and comment by representatives of all points of view, all affected levels of government, technical experts, and interested groups. The Commission then debates each issue and formulates its policy position. Commission findings and recommendations are published and draft bills and executive orders developed to assist in implementing ACIR policy recommendations.
