A COMMISSION SURVEY

FOREWORD

Ł

As part of its continuing research on fiscal federalism, the Advisory Commission on Intergovernmental Relations believes it is useful to determine public attitudes on major intergovernmental fiscal issues. Each year since 1972, the Commission has contracted with Opinion Research Corporation of Princeton, New Jersey, to gauge public opinion as to tax instruments, Federal aid, and effectiveness of the levels of government. This publication presents both the current and cumulative record of these surveys.

This study was prepared by Will Myers, senior analyst, and John Shannon, assistant director, of the Commission's public finance staff. All interpretations of the data are those of the Commission's staff.

The 1975 Survey

Introduction

Four major findings emerge from an analysis of the latest ACIR public opinion poll on taxes, governmental performance, and general revenue sharing conducted during May 1975.

- The Federal government was selected by a clear margin as the level of government that provided the most for the tax dollar. This marked a turnabout from last year's results which showed all three levels of government about on a par.
- The Federal income tax and the local property tax draw about equal fire as the worst or least fair taxes. This pattern has remained fairly stable for the last three years.
- The revenue sharing program was again strongly supported by public opinion, but by a smaller margin than last year. Almost one quarter of those queried had "no opinion" when asked if they approved or disapproved of this Federal aid program.
- An overwhelming proportion of national opinion holds the view that the general level of governmental services and taxes to finance them should be kept about where they are or decreased. A very small minority of a cross-section of the American public subscribes to the view that governments should "increase services and raise taxes."

The Most Popular Level of Government

The number of Americans who believe that they receive more for their money from the Federal government than they do from state or local government rose sharply from 29 percent to 38 percent in the past year,

reversing a downward trend evident in the past three polls. (See *Table 1*.) For the fourth year, the public was asked:

From which le get the most flocal?	evel of go		-	-
			of Total Public	1
	May 1975	April 1974	May 1973	March 1972
Federal	38%	29%	35%	39%
State	20	24	18	18
Local	25	28	25	26
Don't Know	17	19	22	17

The upturn in public favor for the Federal government appears to be attributable in large part to nonfiscal factors, primarily the end of the Watergate crisis and the related upswing in public confidence in the Presidency.

It may also be attributed in part to the fact that the Federal government enjoys certain fiscal advantages over state and local governments, particularly in periods of recession. Because of its ability to engage in deficit financing, only the Federal government is in a position both to expand its spending and cut its taxes. In sharp contrast, many state and local governments have to take highly unpopular action — either increase taxes or decrease services, or both.

In any event, the Federal government has now climbed back to the confidence level it held in March 1972 and, in the process, pushed state and local governments down a few points from their 1974 "highs." It should also be noted that the "don't know" category has now dropped back to the "low" (17%) registered in 1972.

		Table II			
	Which do yo	u think is the wors	t tax — that is, the le	ast fair?	
		Pe	rcent of Total U.S. P	ublic	
	May 1975	April 1974	October 1973*	May 1973	March 1972
Federal Income Tax	28%	30%	25%	30%	19%
State Income Tax	11	10	13	10	13
State Sales Tax	23	20	17	20	13
Local Property Tax	29	28	31	31	45
Don't Know	10	14	16	11	11

The Worst Tax

This year's poll regained for the local property tax, by a small margin, the dubious honor of being considered the least fair of the major Federal, state, and local taxes. For the past three years, including 1975, it has been practically a stand-off between the Federal income tax and the local property tax. (See *Table II*.) In sharp contrast, the first ACIR poll in March 1972 found that the local property tax was by far the most unpopular of major revenue producers.

Federal income tax rebates were being distributed during this year's polling period — an action which may explain, at least partially, the diminution in public antipathy toward the Federal income tax.

While the relative disfavor of the property tax remained about the same for the nation as a whole, regional variations were noteworthy. For example, in the West it was named the worst tax by 27 percent of the respondents in 1975, down from 38 percent in 1974. In the North Central region the results showed an opposite trend, 34 percent in 1975, up from 27 percent in 1974. (*Table 2.*)

The Revenue Sharing Rating

The revenue sharing program was again strongly supported by public opinion, by a smaller margin than in 1974, but by about the same margin as in 1975. (See *Table 111.*) The percentage favoring the program went from 65 percent to 55 percent and there was a related increase from 13 to 22 percent in those opposed to the program. In each of the last three years the public was asked:

Table III

In addition to providing certain moneys to state and local governments for specific purposes, the national government also gives a form of Federal aid called revenue sharing. Under this program, state and local governments receive about \$6-billion a year to use as they think best. Do you favor or oppose this revenue sharing form of Federal aid?

Percent of Total U.S. Public

	May 1975	April 1974	May 1973*
Favor	55%	65%	56%
Oppose	22	13	18
No Opinion	23	22	26

*In the 1973 poll, the question was worded slightly differently. See *Table 3* for exact wording.

While virtually all respondent categories including those of income and race showed declines in public support for the general revenue sharing program, regional variations were noteworthy. For example, the percent favorable dropped form 69 in 1974 to 51 in 1975 in the North Central region, yet in the West it remained essentially the same in both years.

It is not surprising that a substantial percentage of respondents in the ACIR poll offered "no opinion" as their response. A survey of the general public and

	centage Favo by Region –	-	-
	May 1975	April 1974	May 1973
Northeast	58%	71%	62%
North Central	51	69	50
South	54	62	56
West	57	56	54

community leaders conducted late in 1974 discovered that 43 percent of the general public had not heard about the general revenue sharing program and that only 22 percent of the general public could provide a good acceptable description of the program.¹

The Proper Size of Government

ACIR introduced a new question in its 1975 polling in order to give policymakers at all levels a reading as to the public attitude on the general issue of spending and taxes. The response was clear and unmistakable – hold the line or retrench. (See *Table IV*.)

Regardless of perspective - sex, age, education, occupation, location, income level, family status and race - 70 percent or more of the respondents in each category favors a halt to further expansion of services and taxes at this time. This opinion, while strong in every category of respondent, intensifies as the income of the respondent increases. It is somewhat weaker

Table IV Considering all government services on the on hand and taxes on the other, which of th following statements comes closest to your view				
	Percent of Total U.S. Public			
Decrease services and taxes. Keep taxes and services about	38%			
where they are.	45			
Increase services and raise taxes.	5			
No opinion.	12			

among non-white respondents than among whites, and in the farmer and farm laborer occupation group than in all other occupational groups. (See *Table 4*.)

At a time of economic recession and the resulting uncertainty for individuals and families, it might be expected that respondents would desire to cut back or hold the line on government spending and taxes. As an added note of caution, it should be borne in mind that strong general aversion to greater spending and taxes does not reveal public opinion on specific spending and tax proposals.

The "Don't Knows"

An analysis of the non-response categories to each of the four questions asked in this year's ACIR poll reveals two factors that should be kept in mind in examining these survey results.

Percentages of Non-Response Replies by Question						
Family Income	Worst Tax	Viewpoint on Spending and Taxes	Most Effective Government	General Revenue Sharing		
TOTAL U.S. PUBLIC	10%	12%	17%	23%		
Under \$5,000	19	22	27	38		
\$5,000	11	14	21	29		
\$7,000\$9,999	10	9	13	24		
\$10,000-\$14,000	7	8	15	17		
\$15,000 and Over	6	7	9	12		

¹Opinion Research Corporation, The General Public and

Community Leaders View the General Revenue Sharing Program, Princeton, N.J., Feb. 1975, pp. 2, 3.

First, the public has fewer doubts about "pocketbook" issues such as taxes than it has about abstract questions involving intergovernmental issues. Thus, the no responses ranged, for the four questions, from a low of 10 percent "don't knows" when asked to select the worst tax to a high of 23 percent "no opinion" when asked whether they favored or opposed Federal general revenue sharing with state and local governments.

Secondly, socio-economic status as indicated by income correlates directly with the willingness to express a political opinion. Thus, as income rises, the number of "no opinions" falls.

Variations by Categories

The responses to questions in this poll varied by category of respondent, especially when analyzed by income and race.

The highest income group chose the property tax as the worst tax, expressed strongest preference for the Federal government, and had the highest percentage of respondents favoring general revenue sharing. These outcomes differed noticeably from preferences a year ago when this group showed the strongest preference for local government, and chose the Federal income tax as the least fair.

Non-whites were clearly more favorably disposed toward the Federal government than are the whites and mentioned with equal frequency the Federal income tax and the state sales tax as the worst tax.

The Poll

This report presents the findings of a personal interview research survey conducted among 2,075 men and women, 18 years of age or over, living in private households in the continental United States.

Interviewing for this *Caravan Survey* was completed during the period May 9 through May 23, 1975, by members of the Opinion Research Corporation national interviewing staff. All interviews were conducted in the homes of the respondents.

The most advanced probability sampling techniques were used in the design and execution of the sample plan; therefore, the results may be projected to the total U.S. population of men and women 18 years of age or over.

Only one interview was taken per household, regardless of the number of people 18 years of age or over in the household. Weights were introduced into the tabulations to ensure proper representation in the sample.

The tables read across. All figures in the body of the tables are percentages. Throughout the tables, an asterisk (*) signifies any value less than one-half percent. Where percentages add to more than 100, it is because of multiple answers.

The following definitions are provided for some of the sidebreaks by which the data are analyzed. Other sidebreaks are selfexplanatory.

Occupation refers to the occupation of the chief wage earner in the household.

City Size is based on interviewer observation of the respondent's location in terms of area, and the age and type of dwelling. This sidebreak does not add to the total number of interviews, as some respondents simply do not qualify within a definition. For example, a suburban garden apartment does not fit the description "single family dwelling."

For those categories that are not selfexplanatory, the following definitions are provided:

Old Suburb – single family dwelling in a small town or suburb built prior to World War II

New Suburb - single family dwelling built since World War II

City 1 Family – single family dwelling within a metropolitan area

City Multifamily – multiple family dwelling, which would include a duplex, double house, residential house with more than one family living in it, etc., within a metropolitan area

Income is total family income in 1974, before taxes.

Geographic Regions include:

- Northeast: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania
- North Central: Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas
- South: Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisana, Oklahoma, Texas
- West: Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California

Table D

Here are Some of the Reasons that People give us for Feeling that the Property Tax is not a Good Tax. Which one of these do You Feel is the Most Important Reason for Dissatisfaction With the Property Tax?

- 1. It is hardest on low income families.
- 2. It is based on estimates of home value that are not always fair.
- 3. Reassessments may sometimes result in a shocking tax bill increase.
- 4. It discourages homeowning.
- 5. It taxes any increase in the value of a home over the original purchase price, even though that increase is only on paper and not in the homeowner's hands unless he sells the house.

April 1974

- 6. Property taxes have been going up faster than other taxes.
- 7. No opinion.
- 8. Don't agree that property tax is not a good tax.

Here are Three Statements About Taxes. Which of the Statements Agrees Most with Your Own Thinking?

- 1. The Federal government should start a value added tax (a form of national sales tax) and use the money to help reduce local property taxes.
- 2. The Federal goverment should not start a value added tax (a form of national sales tax) but should raise individual income taxes to help reduce local property taxes.
- 3. The Federal government should take neither of these actions to help reduce local property taxes.
- 4. Don't know.

Ta	ble	F
----	-----	---

- A. Suppose the Federal Government Must Raise Taxes Substantially, Which of These do You Think Would be the Best Way to Do It?
- B. Which Do You Think Would be the Next Best Way?
- 1. Collect a value added tax (VAT), a form of national sales tax on things other than food and similar necessities.
- 2. Raise individual income tax rates.
- 3. Raise money by reducing special tax treatment for capital gains and cutting tax deduction allowances for charitable contributions, state and local taxes, medical expenses, etc.
- 4. Don't know.

what is acir?

The Advisory Commission on Intergovernmental Relations (ACIR) was created by the Congress in 1959 to monitor the operation of the American federal system and to recommend improvements. ACIR is a permanent national bipartisan body representing the executive and legislative branches of Federal, state, and local government and the public.

The Commission is composed of 26 members - nine representing the Federal government, 14 representing state and local government, and three representing the public. The President appoints 20 - three private citizens and three Federal executive officials directly and four governors, three state legislators, four mayors, and three elected county officials from slates nominated by the National Governors' Conference, the Council of State Governments, the National League of Cities/U.S. Conference of Mayors, and the National Association of Counties. The three Senators are chosen by the President of the Senate and the three Congressmen by the Speaker of the House. Each Commission member serves a two year term and may be reappointed.

As a continuing body, the Commission approaches its work by addressing itself to specific issues and problems, the resolution of which would produce improved cooperation among the levels of government and more effective functioning of the federal system. In addition to dealing with the all important functional and structural relationships among the various governments, the Commission has also extensively studied critical stresses currently being placed on traditional governmental taxing practices. One of the long range efforts of the Commission has been to seek ways to improve Federal, state, and local governmental taxing practices and policies to achieve equitable allocation of resources, increased efficiency in collection and administration, and reduced compliance burdens upon the taxpayers.

Studies undertaken by the Commission have dealt with subjects as diverse as transportation and as specific as state taxation of out-of-state depositories; as wide ranging as substate regionalism to the more specialized issue of local revenue diversification. In selecting items for the work program, the Commission considers the relative importance and urgency of the problem, its manageability from the point of view of finances and staff available to ACIR and the extent to which the Commission can make a fruitful contribution toward the solution of the problem.

After selecting specific intergovernmental issues for investigation, ACIR follows a multistep procedure that assures review and comment by representatives of all points of view, all affected levels of government, technical experts, and interested groups. The Commission then debates each issue and formulates its policy position. Commission findings and recommendations are published and draft bills and executive orders developed to assist in implementing ACIR policies.
